In most greenhouses you will find tomatoes growing on. It is surprising that we have an irrepressible urge to grow them. They are classified into two types: Growth type-Cordon and Bush. Cordon is the single-stemmed plant which requires support using a cane or string. It grows 6 ft. or more. Where height is a problem grow a Bush type. It grows to 1-3 ft. high but its growth is rather untidy. The fruit type varieties are-Hybrid, Beefsteak and Cherry. The Hybrid variety has two important advantages-they are generally heavier yielding and also have a high degree of disease resistance. The Beefsteak variety produces the large and meaty tomatoes-which are very popular in the US. They are excellent for sandwiches but not for frying. The Cherry or bite-sized tomato is much smaller but the flavour is outstanding.
